The Thales FoRMATION integrated product range of training devices offer high fidelity solutions, meeting the training needs for tanker aircraft.

Thales has a proven capability for providing training solutions on such programmes as the KC-10 for the USAF. This programme set new standards for the modelling of the interaction between tankers and receivers. It remains the only training device to reach the fidelity required for Aerial Refuelling Airplane Simulator Qualification (ARASQ) certification.

Thales is also a world leader in the provision of Synthetic Environments and the aircraft systems such as Radar, Data Link and Defensive Aids which interact with them. Recent programmes including WedgeTail for the RAAF and Nimrod MRA4 for the RAF have raised our capabilities to new levels.
The Thales FoRMATION product range provides complete solution packages, in addition to specific simulators and equipment customised to individual customer requirements.

The suite of products include:

- Full Flight Simulators (FFS)
- Fixed Base Simulators (FBS)
- Maintenance Training Simulators (MTS)
- Flight Training Devices (FTD)
- Thales FoRMATION System Trainers (TFST)
- Mission System Part Task Trainers (MPTT)
- Enhanced Crew Resource Management Trainers (ECRM)
- Flight Management System Trainers (FMST)
- Computer Based Training (CBT)
